

Stepan Demianenko

Graduate Software Engineer - Backend | Android | Full-Stack Systems

Edinburgh, UK • UK Work Authorisation • Open to UK roles / relocation

stepan.demyanenko30@gmail.com • stepandemianenko.dev • github.com/sneri12pic • linkedin.com/in/stepan-demianenko

PROFILE

Final-year BEng Software Engineering student with practical experience across backend APIs, Android development, data workflows, database-backed systems, CI/CD, Docker, and secure web development. Strongest evidence includes Python/FastAPI workflow automation, Django REST backends, Kotlin/Jetpack Compose Android development, and Java/Spring Boot architecture prototypes.

EDUCATION

Edinburgh Napier University

Expected 2026

BEng (Hons) Software Engineering - Edinburgh, UK

- Honours project: designed, implemented, and evaluated an Android fitness prototype using **Kotlin**, **Jetpack Compose**, **Room**, **Health Connect**, MVVM, GitHub Actions, and formative usability evaluation with 5 participants.
- Relevant modules: Algorithms & Data Structures, Databases, Web Technologies, Software Engineering, Secure Software Development, System Architecture.

EXPERIENCE

Legal-Pythia LLP - Software Developer Intern

Oct 2024 - Jan 2025

AI-driven legal technology - Remote

- Refactored Python/Jupyter data-processing work into modular Python scripts and **Pandas** pipelines, improving maintainability and reducing runtime by roughly **30%** on **10GB+** datasets.
- Developed third-party data-ingestion workflows and asynchronous **FastAPI** services orchestrated with **Temporal**, supporting reliable, reproducible workflow execution.
- Improved reliability with idempotent retry logic, structured logging, clearer workflow boundaries, and proactive bottleneck identification.

PROJECTS

SDT-Informed Fitness Motivation App

Aug 2025 - Apr 2026

Kotlin, Jetpack Compose, Room, Health Connect, MVVM, JUnit, Espresso, GitHub Actions

- Built a local-first Android workout tracker covering routine setup, gym sessions, set/reps/weight logging, rest days, progress views, and optional Health Connect data paths.
- Iterated the prototype through formative usability evaluation with 5 participants, improving Home-screen clarity, workout logging flow, and progress interpretation.

Okta Security Dashboard Backend

Apr 2025

Python, Django REST Framework, MongoDB, Redis, Docker, Okta OIDC, Prometheus/Grafana

- Contributed REST API endpoints and backend data flows for Okta log analytics, metrics, forensics, protected routes, authentication, caching, and containerised local infrastructure.

DE-Store Prototype - Modular Backend Architecture

Nov 2025

Java, Spring Boot, REST APIs, Kafka, PostgreSQL, JPA, H2 tests, Docker, Maven

- Built a Spring Boot store-management prototype with API gateway routing, pricing/inventory/loyalty modules, domain events, optional Kafka low-stock notifications, and H2-backed tests.

SecureDev - Web Security Coursework

May 2026

Java web application, SQLi/XSS/CSRF/session/file-upload mitigation, security testing

- Analysed, exploited, and mitigated common web vulnerabilities, demonstrating normal behaviour, successful exploitation, and failed exploitation after mitigation.

TECHNICAL SKILLS

Languages: Python, Java, Kotlin, JavaScript/TypeScript, C#, C++, SQL

Backend/Data: FastAPI, Django REST Framework, Spring Boot, REST APIs, Pandas, PostgreSQL, MongoDB, Redis

Mobile: Android, Jetpack Compose, Room, MVVM, Health Connect, Gradle, Flutter/Riverpod basics

DevOps/Quality: Docker, Docker Compose, GitHub Actions, Git, JUnit, Espresso, CI/CD, API testing, debugging

ACHIEVEMENTS

- Winner - Napier Hackathon 2023: 1st place out of 10 teams. **Languages:** English fluent, Ukrainian native, Russian fluent.
